

The latest development of Bauer technologies

Dieter Stetter

Bauer Technologies Far East Group

Introduction of the Bauer Group of companies:

The Bauer Group has developed as a family enterprise of the Bauer family since 1790 over 8 generations from a coppersmith shop to a multinational company operating in 70 countries with more than 100 companies. Meanwhile the Group operates in three segments namely Bauer Construction, Bauer Equipment and Bauer Resources. The mission of the company is being a leading provider of services, equipment and products dealing with ground, ground-water and resources.

Innovation and improvements on Bauer equipment:

Over the years the requirements to construction equipment has shifted to require highly efficient,

low noise, low pollutant, semi autonomous, remote controlled, online connected, fuel efficient, small footprint, HSE compliant equipment for the future construction challenge. The loss of many very experienced construction technicians into retirement and the difficulties to find new staffs require equipment to be more attractive workplace and the facility to train operators on simulators before they even enter the site. New developments and future plans are shown here.

Recent interesting projects and challenges:

Developments in size and scope are shown as practical examples with some recent projects carried out by Bauer Construction or using Bauer equipment.
